

Business Insights Report

This Report is based on given dataset for the Task. We have founded then opensource dataset of SuperStore Sales Data to apply tasks activities. With the dataset of sales over the year. This report analyzes Products sales, profit, Categeory, and product performance across different countries and customer segments. Also with the helps of different tools like Excel, MySQL and Power BI for making full analysis of dataset to take decision.

Cleaned and analyzed dataset using tools like Excel, MySQL and powerBI . The objective of this task is to identify business trends, profitable products, underperforming products, and the impact of Sales on profitability.

Interactive Power BI dashboards were created to visualize key business metrics and support decision-making.

Data Preparation and Cleaning

Before analysis, the dataset was cleaned and prepared using Excel and SQL.

The following preprocessing steps were performed:

- Firstly analysed the data numbers of rows and columns etc. parameters.
- Handeled missing values, outliers and duplicates.
- Performing overall EDA operations.
- Converted Order Date and Ship Date into proper date formats.

These steps ensured the dataset was accurate and ready for analysis.

Exploratory Data Analysis (EDA)

Exploratory Data Analysis was conducted to understand sales patterns and business performance.

- Sales distribution across regions.
- Quantity sold across categories.
- Monthly sales trend analysis.
- Profit analysis by category.
- Relationship between sales and profit.

SQL Analysis

MySQL is used to extract useful business insights from the dataset:

Some queries used for analysis task:

- Top-selling products.
- Top profitable products.
- Total sales by region.
- Quantity sold by category.

These queries helped summarize large amounts of data efficiently.

Power BI Dashboard

An interactive dashboard was developed in Power BI containing:

- ✓ KPI's for Total Sales, Total Profit, and Total Orders.
- ✓ Bar, Line, Pie chart for data comparison, trend analysis and summerized visualization.
- ✓ Tables for top performer Customers.

The dashboard enables quick identification of business performance and trends.

Key Business Insights

Based on regional sales analysis, the highest-performing region contributed the largest share of total revenue.

- West region generates highest sales among all.
- Office supplies are most profitable category
- December month generating more sales
etc.

Like these answers of question we can give using these Data analysis tasks.

Recommendations for Management

- Focus marketing efforts on the highest-performing region to maximize revenue growth.
 - Increase investment in the most profitable product category.
 - Continuous track business performance using Power BI dashboards for informed decision-making.
 - Promote high-profit products rather than relying heavily on discount-driven sales.
-

Conclusion

Main purpose to clean and perform EDA operation to analyse the dataset and used it for decision making

The Power BI dashboard successfully identified important business insights related to sales, profit, discounts, and product performance. The analysis helps management make informed decisions regarding pricing, marketing, and operational strategies.

This project demonstrates the use of data visualization and analytics techniques to convert raw business data into actionable insights.
